zaloclaw-ui

ZaloClaw UI is a setup companion for running OpenClaw with Zalo smoothly on your local machine.

Its primary purpose is to make OpenClaw onboarding easier and less error-prone for Zalo users.

Project Purpose

This project helps users quickly configure and operate a Zalo-powered OpenClaw assistant, with guided flows for common setup tasks.

What This Project Helps You Set Up

- Configure Zalo bot token and related connection settings.
- Pair and manage gateway or local devices used by the assistant.
- Set up browser automation workflows for assisted tasks.
- Enable local search and retrieval through browser-based capabilities.

Goal

Reduce setup friction so users can move from initial installation to a working Zalo + OpenClaw assistant with minimal manual configuration.

Setup

Start the app locally with one command:

```
npm run dev
```

Then open the local URL shown in terminal (usually `http://localhost:3000`) and follow the onboarding flow.

Onboarding Walkthrough

1. Welcome

Use the welcome screen to begin guided setup.

2. Set Up Zalo

Configure your Zalo bot token and continue pairing/connectivity setup.
